

Modern Hotel HTML Template – Documentation

1. Introduction

Thank you for purchasing the Modern Hotel HTML Template! This documentation will guide you through installation, customization, and usage of your new website template.

2. Folder Structure

...

/assets/

/css/ → All CSS files (e.g., style.css)

/js/ → All JavaScript files (e.g., script.js)

/images/ → All images and logo files

index.html → Home page

rooms.html → Rooms & Suites page

booking.html → Booking page

contact.html → Contact page

documentation.txt → This documentation file

...

3. Installation

1. Unzip the template package.
2. Upload all files and folders to your web server or hosting account.
3. Open `index.html` in your browser to view the website.

4. Customization

4.1. Change Website Name, Address, Email, and Phone

To change the website name, address, email, or phone number, edit the following lines in your HTML files (e.g., `index.html`):

Website Name (Header)

```
```html

 Modern Hotel

```
```

To change:

Replace `Modern Hotel` with your desired name.

Footer Contact Info

```
```html
<div class="mb2" style="fontsize:1.25rem;">
 Email: khan.asfar2005@gmail.com |
 Phone: +92 (302) 0423773 |
 123 Main St, Lahore, Pakistan
</div>
```
```

To change:

Edit the email, phone, and address as needed.

Google Maps Location

```
```html
<iframe src="https://www.google.com/maps?q=Lahore,+Pakistan&output=embed" ...></iframe>
```
```

To change:

Replace `Lahore,+Pakistan` in the URL with your desired location (e.g., `New+York+City`).

4.2. Change Images

Replace images in `/assets/images/` with your own.

Update the `src` attribute in the HTML files to point to your new images.

4.3. Change Colors and Fonts

Edit `/assets/css/style.css` to change color schemes, fonts, or other styles.

For example, to change the header color, modify the `.navbar` CSS rule.

5. Adding/Removing Sections

Each section (About, Rooms, Amenities, Gallery, Contact) is clearly marked in the HTML files.

You can add, remove, or reorder sections by editing the corresponding `<section>` blocks.

6. JavaScript Functionality

All custom scripts are in `/assets/js/script.js`.

This file handles form validation, smooth scrolling, and interactive features.

7. Asset Credits

Bootstrap: <https://getbootstrap.com/>

Images: Unsplash (demo images, not included in download)

Icons: Bootstrap Icons
